1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 3-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eybergen. Eybergen discloses the claimed invention, including the center disk of the power element 14 being in abutment with an inner wall of the housing 16, 18. Thus, Eybergen clearly limits the maximum lift of the valve portion to the travel of the disk within the housing 16, 18. Eybergen, however, does not disclose the recited limitation of the flow rate corresponding to a tonnage set as a capacity which can pass a maximum flow rate. The setting of the flow rate of the refrigerant flowing through the valve is considered to be a matter of obvious choice to one of ordinary skill in expansion valves. No criticality or unexpected results are seen or have been disclosed for the flow rate to correspond to a set tonnage. Furthermore, one of ordinary skill in the art of expansion valves would be able to correspond the flow rate as needed or desired. Also, the expansion valve disclosed in Eybergen would inherently have some correlation between the flow rate and the set tonnage.

3. Applicant's arguments filed August 26, 2005 have been fully considered but they are not persuasive. The plate 34 in Eybergen inherently limits the ability of the valve to travel. Thus, the plate 34 meets the claim language in the last paragraph of claim 1.

4. Inasmuch as Eybergen meets all of the structural limitations of claim 1, it is also considered to inherently meet the language of the flow rate corresponding to the set tonnage.

5. Furthermore, one of ordinary skill in expansion valves and refrigeration systems would be able to correspond the flow rate to the set tonnage, by merely using common knowledge and without the benefit of Applicant's disclosure.

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
